**Explanation****Explanation/Reference:**

Explanation:

A naturally occurring underscore character may be escaped (or treated as a regular nonspecial symbol) using the ESCAPE identifier in conjunction with an ESCAPE character. The second example in Figure 3-12 shows the SQL statement that retrieves the JOBS table records with JOB\_ID values equal to SA\_MAN and SA\_REP and which conforms to the original requirement:

```
select job_id from jobs  
where job_id like 'SA\_%' escape '\';
```
